

ENERGY SAVINGS YOU CAN VERIFY

WattZap Energy Solutions

Measured savings, not equipment sales

WattZap takes Indian businesses from a free energy audit to independently verified savings — through one platform, one journey and commercial models that pay from results.

- Free EnergyScan audit as the entry point

- Six-stage journey: Diagnose to Prove

- Serving Telangana & Andhra Pradesh

WattZap Energy Solutions · 2026 · Naveen Badarla, Founder

Businesses **overpay** for electricity, invisibly

Three ways money leaks from an industrial electricity bill

₹ Penalties & bill errors

- Power-factor and demand penalties quietly recur on HT bills
- Billing errors and hidden charges go unchallenged
- Sanctioned demand rarely matches how the site actually runs

⚡ Invisible waste

- Idle machines and inefficient motors burn money unseen
- No live visibility of usage, demand or power factor
- Solar systems underperform without anyone noticing

✓ A market that sells kit

- Vendors sell equipment, not outcomes
- Savings are promised upfront but never measured
- Owners get no independent proof of what they saved

● WattZap's answer: measured savings, not equipment sales

● Every claim verified against the DISCOM bill

One journey from audit to **proven savings**

Six stages, each with named products — customers pay as value is proved

- Free audit first; paid products only where value is found

- Locked stages always show what they do and what unlocks them

- Nothing activates without customer approval

A product family built around the journey

Eleven products across six stages — from free audit to verified savings

Diagnose — EnergyScan

- EnergyScan Lite: free first check from one bill
- EnergyScan Pro: 12-month diagnosis, prioritised plan
- Every finding carries value, payback and confidence

Protect — the Guards

- PF Guard and Demand Guard stop recurring penalties
- Bill Guard checks every bill line by line
- Solar Guard watches existing solar performance

Optimise & Generate

- WattZap Edge connects meters and machines securely
- EMS Lite: live monitoring, plain-language alerts
- SolarFit sizes solar from the real load profile

Finance & Prove

- SolarLease: solar without heavy upfront investment
- Savings Assurance verifies savings against baselines
- Models run from free audit to monthly subscription

Product access is entitlement-controlled — nothing is charged without a written proposal the customer approves.

The Savings Command Centre

From site data to verified savings — one connected platform

On site

WattZap Edge device

Existing meters & machines

Solar systems

WattZap platform

Secure data streaming

Baselines & tariff models

Alerts & analytics

Customer experience

Savings Command Centre

Savings Wallet & reports

WattZap Coach

Trust layer

Data provenance tags

Audit trail on every action

Independent verification

Every number is tagged — historical, uploaded, estimated, simulated, live or verified — so customers always know what they are looking at.

Savings are **verified**, not just promised

The Savings Assurance method behind every rupee we claim

Agree the baseline

- The agreed 'before' picture comes first, not after
- Built from 12 months of bills and meter data
- Fair adjustments for production changes

Measure & verify

- Savings compared bill-to-bill against the DISCOM bill
- Named reviewer and customer approver on each saving
- Full evidence: bills, service reports, meter traces

Transparent by design

- Savings Wallet shows every calculation in full
- Every number tagged: estimated, live or verified
- Complete audit trail of approvals and uploads

• Customers pay from measured savings, not upfront kit

• Draft numbers are clearly marked and never final

What **EnergyScan** finds at a rice mill

Our demonstration dataset — an HT-connected mill in Telangana

₹8.4L/yr

Savings identified

7 opportunities from EnergyScan Pro

₹1.25L/yr

First verified saving

APFC repair — payback under 4 months

₹60,000

Billing error caught

Excess demand charge disputed

3.7 yrs

Solar payback

150 kWp sized to the daytime load

- Idle running worth ₹2.1 lakh/yr found in the lunch-break load curve
- Shifting drying to off-peak tariff windows saves ₹1.2 lakh/yr
- 11 demand spikes in 90 days — schedule changes avoid the penalties
- Every figure carries its data tag and confidence level

Illustrative demonstration dataset from the WattZap platform — not audited customer results.

Built for **energy-intensive** businesses

Industrial and commercial sites where electricity is a top-three cost

Rice mills & agro

Motor-heavy loads on penalty-prone HT connections

- PF and demand penalties from mixed motor loads
- Tariff savings by shifting drying to off-peak windows
- Strong rooftop solar economics on daytime loads

Cold storage & food

Round-the-clock loads where waste hides at night

- Night-time consumption drift caught early
- Compressor staging and defrost optimisation
- 24×7 monitoring that pays for itself quickly

EV charging & commercial

New loads with demand charges to manage

- Demand-charge control for charger clusters
- Solar self-consumption for daytime loads
- Session-level cost and margin analytics

Operating region: Telangana & Andhra Pradesh. Also suited to poultry, warehousing and manufacturing SMEs.

THE FIRST STEP COSTS NOTHING

Start with a free EnergyScan

One electricity bill is enough to begin

EnergyScan Lite reads a single bill and returns an energy-cost score, likely problem areas and an estimated savings range — with a clear next step and no obligation.

- Free for qualified customers
- First findings within a day
- Measured savings, not equipment sales
