

COMPANY INTRODUCTION & LEGAL SUPPORT BRIEF

WattZap Energy Solutions

An introduction to WattZap and the legal support we need to go live

WattZap helps Indian businesses cut electricity costs through measured, verified savings — an audit-led, technology-driven service now preparing for commercial launch.

- Measured savings, not equipment sales

- Energy technology for Telangana & AP

- Preparing for commercial go-live

Prepared for our legal partners · August 2026 · Naveen Badarla, Founder

Measured savings, not equipment sales

What WattZap does for energy-intensive businesses

Diagnose — EnergyScan

- Free EnergyScan audit of bills, loads and tariffs
- Smart metering installed at the customer site
- Baseline load profile within two weeks

Optimise & Protect

- WattZap platform monitors usage in real time
- Tariff, power-factor and demand optimisation
- Protection against outages and power-quality issues

Prove & Share

- Savings validated against the DISCOM bill
- Customers pay from measured savings, not upfront kit
- Savings Command Centre reporting every month

● Focus segments: rice mills, EV charging, commercial sites

● Operating region: Telangana & Andhra Pradesh

● Hardware built with engineering partners

The WattZap customer journey

Six stages — and each one carries contracts and compliance

Where WattZap stands **today**

From build to commercial launch — indicative plan

Working draft — dates indicative; legal readiness is the gate for go-live.

Compliance support we need to go live

Where we need your advice before commercial launch

Corporate & Tax

- Company structure and Companies Act 2013 filings
- GST registration and invoicing for savings-share fees
- State registrations: Shops & Establishments, professional tax

Data Protection

- DPDP Act 2023 readiness for customer energy data
- Consent, notices and retention for metering data
- Platform privacy policy and processor terms

Energy Sector Rules

- Electricity Act 2003 and state regulator norms
- EV charging guidelines and DISCOM interfaces
- Licences or exemptions our model actually needs

Website & Consumer

- Terms of service for the platform and website
- Consumer protection view on published savings claims
- Marketing and testimonial compliance

Working draft — we want your view on the full checklist, not just these items.

Documents we need **drafted**

Three families of agreements, roughly in priority order

● First priority

Customer Agreements

The paper behind every rupee of revenue

- EnergyScan audit terms and site-access consent
- Pilot agreement for 90-day deployments
- Savings-share service agreement with billing terms
- Data-use and metering consent clauses

Partner & Vendor

Hardware, installation and suppliers

- NDA and MSA with hardware engineering partners
- Statements of work for pilot hardware builds
- Installer and procurement vendor terms

Company & Platform

The company's own foundations

- Founder, employment and ESOP documentation
- IP assignment for platform and brand assets
- Platform terms of service and privacy policy

Existing drafts, where any, will be shared for review rather than fresh drafting.

How we would like to **work together**

A phased engagement, sized for an early-stage company

Now — before go-live

- Compliance checklist and gap review
- Platform terms of service and privacy policy
- Pilot agreement for the first two sites

First 90 days

- Customer savings-share agreement suite
- Partner NDA, MSA and vendor terms
- DPDP Act consent and notice pack

Ongoing

- Retainer counsel for contracts and filings
- Regulatory watch on energy and data rules
- Support as financing partners come on board

• Seeking a fixed-fee scope for go-live work

• Plus a monthly retainer for ongoing counsel

• Contact: Naveen Badarla, Founder, WattZap
